

Yingjie (Jessie) Hong

AI PRODUCT DESIGNER & PM CANDIDATE

"Turning complex systems into intuitive products"

Northeastern University | M.S. Information Systems | INFO 7375 Branding & AI Final Presentation

ABOUT ME

Key Professional Highlights:

- 2 years spanning product design, UX research, and AI-assisted workflows across fintech and tech industries
- Built DesignPilot — an AI tool addressing the designer-to-PM handoff gap

Educational Background:

- MS in Information Systems at Northeastern University
Expected 2026
- BS in Information Science and Technology at Pennsylvania State University
2017 - 2021

Previous working experience:

- Product Designer · Ping An Bank — Designed user flows and prototypes for fintech products
- UX & Product Design · xFusion Technologies — design for B2B tech products at the intersection of hardware and software
- Brand & Product · ArtGENE / Smart Core Technology — product design and brand strategy work

HOW I'M DIFFERENT (UVP)

I help tech startups and product teams by combining AI-driven design workflows with product strategy, allowing them to transform complex technologies into intuitive and user-friendly digital experiences.

Competitive Positioning

PROFILE	STRENGTH	WHAT I ADD
Visual Designer	Strong aesthetics & craft	<i>Systems credibility + technical feasibility</i>
Ex-Engineer Designer	Deep technical skills	<i>Structured UX research methodology</i>
PM-Track Candidate	Business strategy	<i>Design craft + AI fluency + execution</i>

I sit at the intersection of design craft, product strategy, and AI fluency.

BRAND PILLARS

Human-Centered

Every decision starts with the user. I design for the people who will actually use the product, not for the metrics that describe them.

AI-First

I use AI not as a shortcut, but as a workflow layer — accelerating research, prototyping, and handoff without replacing judgment.

Strategic

Good design starts upstream. I frame problems before I solve them, and align every design decision to a product goal.

Minimal

Clarity is a design decision. I remove friction from both the interface and the process — less noise, more signal.

Collaborative

Design doesn't ship alone. I build bridges between design, engineering, and product so the best ideas actually reach users.

TARGET AUDIENCE PERSONAS

PERSONA 01 — PRIMARY

Tech & SaaS Hiring Managers

Name: Sarah Chen

Age: 34

Role: Design Lead at a Series B AI startup, 4 years experience

Pain Point: Tired of hiring designers who can't communicate with engineering or understand product tradeoffs. Needs someone who bridges both worlds.

Goal: Find a designer who thinks strategically, ships fast, and doesn't need hand-holding on product decisions.

Why me: AI-first workflow + product strategy background + real handoff experience at scale.

PERSONA 02 — SECONDARY

Product & Engineering Leads

Name: Marcus Liu

Age: 31

Role: PM at a mid-size SaaS company, advocates for design investment

Pain Point: Designers on his team produce beautiful work that consistently gets deprioritized because it's not framed in business terms.

Goal: Hire or collaborate with a designer who speaks PM language and can defend design decisions in sprint planning.

Why me: I built DesignPilot specifically because I lived this exact frustration.

VISUAL IDENTITY SYSTEM

HANDWRITTEN MONOGRAM

FRAMEWORK: HERO'S JOURNEY

Chosen because this is an identity transformation, not just a skill upgrade.

Connected to brand values:

- *Strategic (asking the right questions upstream)*
- *Human-Centered (never stopped designing for users)*
- *AI-First (used AI to build the tool that solved the problem)*

DesignPilot

An AI tool that helps design decisions survive the handoff — keeping rationale visible and actionable for the whole team.

! The Problem

Design rationale disappears between the Figma file and the sprint board. Great design decisions die in Figma comment threads. Engineers build the wrong thing.

✓ The Solution

DesignPilot translates design decisions into language engineers and PMs actually use — so the reasoning behind the design reaches the roadmap, not just the pixels.

HOW IT WORKS

Live demonstration

[designpilot_demo.html.pdf](#)

Key features

Feature 01

Business Framing

Connects every design decision to user goals and product metrics automatically.

Feature 02

Instant Translation

From Figma comment to sprint-ready language in seconds.

Feature 03

RoadMap Output

Structured for product docs, tickets, and stakeholder briefs.

Methodology: Claude AI reasoning + product strategy framework developed from firsthand handoff experience

Brand Practice

THE BRAND CLAIM

"I combine AI workflows with product strategy"

My approach isn't just about design; it's about leveraging AI to enhance product thinking and streamline the path from idea to execution.

THE PROOF

DesignPilot exists because I lived the problem

I didn't just study the designer-to-PM transition — I built a tool to solve the exact friction I experienced firsthand at Ping An Bank.

THE OUTCOME

A working prototype with real signals

A product that practices what my brand preaches: real-time signal processing, AI reasoning, and actionable design rationale.

THE BRAND IS LIVE.

**"The transition isn't coming.
It's already happening."**
