

AegisOps

External Predictive Operational Intelligence for DevOps & SRE Teams

AegisOps monitors AWS service updates in real time and converts them into prioritized risk alerts with recommended engineering actions — before production is affected.

"Know the risk before the outage."

Rajat Puli · Branding & AI . Northeastern University · Spring 2026

User Paint Points

You Find Out Too Late

AWS announced the change that caused your outage **48 hours before it happened** — buried in a post nobody read.

Manual Monitoring Doesn't Scale

Team tracks 3+ RSS feeds manually — **8–10 hours/week** reading, triaging, forwarding. Updates still get missed.

Nobody Watches AWS

Your monitoring watches your systems. Your APM watches your app. **No tool watches AWS.**

The Cost Is Real

\$50K–\$500K per major outage. 62 minutes average detection time. 0 tools built for external vendor monitoring.

Competitive Positioning

Every tool on the market was built to **respond**. Not to prevent. AegisOps occupies a category nobody else has built.

Tool	Source	Timing	Position
PagerDuty	Internal alerts	After failure	Reactive + Complex
Datadog	Internal metrics	After degradation	Semi-Proactive
New Relic	Internal telemetry	After incident	Reactive + Complex
AegisOps ✓	External vendor announcements	Before impact ✓	Proactive + Simple ✓

ⓘ We created a category nobody else occupies: **External Operational Intelligence**. Every competitor watches your systems. AegisOps watches AWS. That is the entire differentiation.

Brand Strategy

Unique Value Proposition

AegisOps helps DevOps teams prevent outages through AI-driven external cloud intelligence that predicts operational risk **before systems fail**.

Target Audiences

Primary — DevOps / SRE Engineers: on-call, AWS-dependent, prevention-focused.

Secondary — Engineering Managers & VPs: accountable for uptime SLAs.

Tertiary — Investors & Accelerators: evaluating AI infrastructure tooling.

Brand in Action

Live Website — aegisops.app

- Hero: *"Know what AWS changed. Before your systems do."*
- Live P0/P1/P2 alert ticker scrolling in real time
- Color-coded intelligence table by priority
- Pricing: Starter free · Pro \$29/mo · Enterprise custom

Social Proof & Community

"Most AWS outages aren't caused by your code. They're caused by AWS changing something your team didn't see in time. We built AegisOps to fix that."

Brand Storytelling – The Hero's Journey

"The 3 AM Call Nobody Made"

How AegisOps Works

300+ AWS updates processed per run. 25 AI calls hard-capped for predictable cost. Average run time: **62 seconds**. Tested 1× to 50× — zero failures.

Key Features

Real-Time Monitoring

3live RSSsources ingested automatically.
300+ updates per run. **8–10 hours/week eliminated.** Zero manual reading required.

AI Risk Classification

GPT-4.1 assignsP0/P1/P2 priority,
identifies impacted services, and delivers a
recommended action — not just a warning.

Audience-Aware Output

One run. Three tailoredviews— Cloud
Engineer, Developer, Engineering Manager.
Your entire org covered.

Know the Risk Before the Outage.

External Predictive Operational Intelligence — Built for Engineers, by
Engineer.
